<b>Statistics [NW/ W]</b>	[Valid=27523 /-] [Invalid=152001 /-] [Mean=45.412 /-] [StdDev=15.845 /-]
<b>Definition</b>	Generated from consolidated variables a941m and a941y.
<b>Universe</b>	If R has a partner.
<b>Literal question</b>	In what month and year did your partner/spouse start this leave? In what month and year did he/she become unemployed? Since what month and year is your partner/spouse a student, in school, or in vocational training? In what month and year did your partner/spouse retire? Since what month and year is your partner/spouse a homemaker?
<b>Notes</b>	Partner's time of birth was deducted from HH grid (co-resident partner) or Q 311 (non resident partner). If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December". In Belgium if the partner is still in education (a941y==2301) then the variable was coded as system missing.

<b>Definition</b>	Country specific variable for AUS. The responding person weight is the cross-section population weight (_hhwtrp in original HILDA file) for all people who responded in the relevant wave (i.e. they provided a personal interview). The sum of these responding person weights for wave 1 is 15.0 million. Weighted by State; Sex by broad age; State by labour force status; Marital status; and Occupation
