Generations and Gender Survey Italy Wave 1 & Wave 2 (GGS Italy Wave 1 & Wave 2)

Famiglia e soggetti sociali (FSS) (2003); Criticità dei percorsi lavorativi in un'ottica di genere (2007)

Abstract	
<p>The Generations and Gender Survey (GGS) provides micro-level data with the aim of significantly improving the knowledge base for social science and policymaking in Europe and developed countries elsewhere.</p> <p>In Europe 2020, the European Union develops a strategy "to help us come out stronger from the crisis and turn the EU into a smart, sustainable and inclusive economy delivering high levels of employment, productivity and social cohesion".</p> <p>The economic crisis affects not only day-to-day decisions, but also fundamental choices at all stages of people's lives: marriage and childbearing, the combination of employment and caring responsibilities for the young and the old, retirement, housing, and ageing well. The GGS has been developed to provide scientists with high-quality data to contribute scientifically grounded answers to these key policy questions. Survey content focuses on intergenerational and gender relations between people, expressed in care arrangements and the organization of paid and unpaid work. Key feature of the survey are:</p> <ul style="list-style-type: none"> - Cross-national comparability. In each country data is collected on the basis of a common international questionnaire and guidelines about the methodology. Data processing includes central harmonization of national datasets. - A broad age range. It includes respondents between the ages of 18 and 80. - A longitudinal design. It has a panel design, collecting information on the same persons at three-year intervals. - A large sample size. It has an average of 9,000 respondents per country at Wave 1. - A theory-driven and multidisciplinary questionnaire. It provides data for policy relevant research by demographers, economists, sociologists, social policy researchers, social psychologists and epidemiologists. The questionnaire is inspired by the theory of planned behavior. - Possibility to combine the survey data with macro data provided by the GGP Contextual Database. This combination enables analyses of individuals and families in their cultural, economic, political, social and policy contexts.

Sampling
<p><u>Sampling Procedure</u></p> <p>WAVE 1 SAMPLING PROCEDURE</p> <p>1. Sampling frame</p> <p>1.1 Type of frame: Population register from municipalities selected at first stage.</p> <p>1.2 Frame coverage: not available</p> <p>1.3 Frame size: 24,000 households selected from 755 primary units (municipalities), about 10% of total municipalities.</p> <p>1.4 Level of units available: Municipalities.</p> <p>2. Sampling method</p> <p>2.1 Sampling method type: Two-stage sampling with stratification of primary sampling unit.</p> <p>First stage: selection of primary sampling units (municipalities) stratified by region, municipal typology and population size. Inclusion probabilities are proportional to demographic size (PPS) of municipalities in each stratum; the selection is performed according to the Madow method (Madow, W. G. 1949. "On the Theory of Systematic Sampling, II," Annals of Mathematical Statistics, 20, 333-354.)</p> <p>Second stage: elementary sampling units (households) are selected from Municipal population offices with Systematic sample and equal inclusion probabilities.</p> <p>2.2 Sampling stage definition</p> <ul style="list-style-type: none"> - PSU: Municipalities. - SSU: Households. - TSU: not applicable <p>2.3 Sampling stage size</p> <ul style="list-style-type: none"> - PSU: About 800. - SSU: 24,453. - TSU: not applicable <p>2.4 Unit selection: The primary sampling units of the sample design (the municipalities) are stratified by region, municipal typology and size in terms of population. Inclusion probabilities are proportional to demographic size and the selection scheme is random.</p> <p>2.5 Final stage unit selection: Final units are not stratified and are selected by systematic random (i.e. use of step) with random seed.</p> <p>2.6 Within Household unit selection: All persons in the household were selected.</p> <p>2.7 Stratification: Only primary units are stratified as described above, with the aim to obtain a self-weighting sampling design at regional level.</p> <p>2.8 Sample size</p> <ul style="list-style-type: none"> - Starting size sample: 24,453 households. - Aimed total size at Wave 1: About 50,000 individuals of all ages. - Aimed total size at Wave 3: No wave 3 planned. <p>2.9 Estimated Non-response</p> <ul style="list-style-type: none"> - Initial non-response: About 15%. - Yearly attrition: None. - Non response measures: None, post stratification is applied in weighting process. - Within household non-responses measures: Proxy response was used. The woman is usually selected as proxy of other household members.

WAVE 2 SAMPLING PROCEDURE**1. Sampling frame**

1.1 Type of frame: Name list of respondents aged 18-64 years in wave 1 (2003) with an available telephone number (mobile or not)

1.2 Frame coverage: Target population: 10,000 individuals

1.3 Frame size: 19,565 individuals

1.4 Level of units available: individuals

2. Sampling method

2.1 Sampling method type: There are 11,511 households, and a total amount of 25,102 individuals (aged 18-64 years in 2003), with an available telephone number. As the aim was to reach a target of 10,000 valid interviews, it was decided to select randomly 19,565 individuals from all households.

2.2 Sampling stage definition

- PSU: The sample design is a complex one as it derives from the sample design adopted for wave 1 (i.e. two-stage sampling procedure) and the selection of people aged 18-64 in wave 1 to be interviewed in wave 2 (Tertiary sample unit).

- SSU:

- TSU:

2.3 Sampling stage size

- PSU:

- SSU:

- TSU: 19,565 individuals

2.4 Unit selection: At least one individual selected from each household.

2.5 Final stage unit selection: According to the name list

2.6 Within Household unit selection: According to the name list

2.7 Stratification:

2.8 Sample size

- Starting size sample: 19,565 individuals

- Aimed total size at Wave 1: 10,000 individuals

- Aimed total size at Wave 3:

2.9 Estimated Non-response

- Initial non-response:

- Yearly attrition:

- Non response measures: Oversampling. In order to reach 10,000 valid interviews, the selected sample is 19,565 individuals

- Within household non-responses measures: Proxy answers were accepted only if it was impossible to book an appointment with the target individual.

Response Rate**WAVE 1**

Frequency of final disposition codes:

I = complete interview: 19,227 households.

P = partial interview: 0

NE = non-eligible: DK

NC = non-contact: DK

R = refusal: 1,560

O = other non-response: DK

UC = unknown eligibility, contacted: DK

UC = unknown eligibility, non-contact: DK

eC = estimated proportion of contacted cases of unknown eligibility that are eligible: DK

eN = estimated proportion of non-contacted cases of unknown eligibility that are eligible: DK

Weighting**WAVE 1 WEIGHT VARIABLES**

The procedure that allows defining the final weights to be attributed to the responding sample units is articulated in the following steps:

- 1) The direct weights are calculated as the reciprocal of the inclusion probability of the units;
- 2) The non-response correction factors are calculated for the total non-response, as the inverse of the response rate at level of the municipality to which each unit belongs;
- 3) We thus obtain the base weights, or weights corrected for the total non-response, multiplying the direct weights by the corresponding corrective factors for total non-response;
- 4) The final correction factors are constructed to allow satisfying, on a regional level, the condition of equality among the known totals of the auxiliary variables and the corresponding sample estimates;
- 5) Finally, the final weights are calculated by means of the product of the base weights for the correction factors obtained as described at step 4.

WAVE 2 WEIGHT VARIABLES

Yes. The calculation of the final weights to be applied to the sample units interviewed in 2007 are obtained starting from the final weights for the wave 1 survey.

- 1) the direct weights are taken from the final weights defined in wave1 (2003 survey);
- 2) the final correction factors are constructed to allow satisfying, at macro-area level, sex and age-group, the condition of equality between known totals (calculated on the longitudinal population 2003-2007) of the auxiliary variables and the corresponding sample estimates;
- 3) Finally, the final weights are calculated as the products of the base weights and correction factors obtained above.

Data Collection	
Data Collection Dates	Wave 1: start 2003-11-01 Wave 1: end 2004-01-01 Wave 2: start 2007-02-01 Wave 2: end 2007-03-15
Data Collection Mode	WAVE 1 Method: Face-to-Face (personal interview) + self-administered questionnaire. Technique: Paper and Pencil. WAVE 2 Method: Telephone interview Technique: CATI

Data Collection Notes

WAVE 1 DATA COLLECTION

1. Interviewers

1.1 Total number of interviewers: 1,645.

1.2 Number of interviewers in the field: 1,645.

1.3 Network organization: 22 regional coordinators.

1.4 Working arrangement of interviewers: Istat makes use of the Municipal Council networks for selecting interviewers, responding to the criteria defined by Istat. Interviewers are mainly employees of the municipal office itself, but also students and others part-time workers. The interviewers belong to a list of household surveys' interviewers that is regionally and centrally monitored. The archive of interviewers is centrally supervised and collects information about interviewers' performances along their past experiences.

1.5 Payment of interviewers: Interviewers were paid per successful interview. Moreover, they received a reimbursement for training and transmission of quality information.

2. Interviewer training

2.1 General interviewing: There were instruction meetings in each province, run by Istat regional offices, held with the interviewers from the sampled municipalities (first step training). Istat regional offices were, in turn, trained by the Istat central office (second step training).

2.2 Survey specific: Yes. General information about the Programme was presented.

2.3 Length: The first step training (Istat central office to regional offices) took two days. The second step training took one day and documentation and slides were disseminated. At the end of the training meetings, a form was filled in collecting the participants' assessments.

2.4 Control of performance: Respondents were randomly recontacted to ascertain the occurred interview. There were two attempts to evaluate each interviewer and in case of false interview all families of the same interviewer were contacted. Only a small portion, less than 4% of the interviews, was considered irregular. Moreover, Istat checked the questionnaires in order to evaluate their quality.

2.5 Interviewer survey: No.

3. Contact protocols

3.1 Advance letter: In order to limit the refusal rate Istat send a letter, before starting up the survey. The letter informed families about the interview and aimed at stimulating the interest of the respondents, explaining the reasons why their collaboration is important, reassuring people about their most common fears and allowing them to understand the expected goals and results.

3.2 Cold contacts: Telephone.

3.3 Scheduling / scattering: The interviewer organized the contacts by him/herself.

3.4 Contact history: No.

3.5 Min number of contacts: No.

2.6 Max number of contacts: No.

4. Questionnaire localization

4.1 Validation: No.

4.2 Pre-test: No. However, the survey was previously conducted in 1998 on an independent sample and, in that case, a pilot study was performed. New questions pertaining to GGS were tested independently.

4.3 Length of interview: Average length of interview per household: 70 minutes.

WAVE 2 DATA COLLECTION

1. Interviewers

1.1 Total number of interviewers: about 20 interviewers, scheduled in 3 groups per day

1.2 Number of interviewers in the field:

1.3 Network organization: centralized

1.4 Working arrangement of interviewers: Fully employed and Contracted - other

1.5 Payment of interviewers: Per interview

2. Interviewer training

2.1 General interviewing: Yes, interviewers were trained about general interviewing technique especially to focus on the follow-up conditions and to the aim of the survey. They were trained by Istat researchers. They have experience on survey interviews because most of them had already worked for Istat.

2.2 Survey specific: Yes, interviewers were also trained about GGS issues. Generally speaking, they received briefing from Istat researcher with PowerPoint presentations. A FAQ document was also prepared to support them. After the training and some tests of interview, there was also a de-briefing.

2.3 Length: Two days

2.4 Control of performance: Yes, Istat personnel and researchers supervised the fieldwork to support and monitor the adequacy of the interviews.

2.5 Interviewer survey: Not a survey, but de-briefings were organized to clarify doubts and provide general aid. Moreover, the monitoring system allow to link interviewer performances to contacts and valid interviews.

3. Contact protocols

3.1 Advance letter: Yes, an advance letter was sent to all sampled individuals. It expresses acknowledgment for the participation in wave1, it explains the aim of the follow-up survey, the relevance for the study of generations and gender, it informs about the protection of personal data and it provides contact information and a toll-free number where to ask for further information. The letter is signed by the President of Istat.

3.2 Cold contacts:

3.3 Scheduling / scattering: Yes, the scheduling procedure distinguishes between morning, afternoon and evening. Moreover, an appointment could be fixed with respondents any day of the week, included on Saturdays and Sundays.

3.4 Contact history: Yes, there was the so-called "Scheda contatti"

3.5 Min number of contacts:

2.6 Max number of contacts: Yes, 11.

4. Questionnaire localization

4.1 Validation: No re-translation was done

4.2 Pre-test: Yes, normal survey route. Moreover the questionnaire was also tested on part of the available sample.

4.3 Length of interview: Average duration about 1 hour.

In case the respondent was busy or not available, we attempted to agree upon a new appointment. Also if the respondent was unavailable to answer to the landline, we offered the possibility to call him/her back on the mobile.

WAVE 1 ACTIONS

1. Dealing with nonresponse

1.1 Screening: Availability to participate to subsequent surveys was asked.

1.2 Refusal conversion: Usual techniques of refusal conversion (an advance letter by Istat was sent to the selected households).

1.3 Incentives: No.

2. Tracking of sampled units

2.1 Respondent contact information: Yes, contact details of the respondent were collected such as: addresses, home telephone number and mobile number of each family member.

2.2 Other contact information: Yes, contact information of each family member.

2.3 Cards: On-line thank-you letter was sent showing the main results of the survey on www.istat.it.

2.4 Additional surveys: No

2.5 Administrative records: For records without a telephone number, Istat asked to the municipality to provide information about their possible change in residential address in order to track them elsewhere.

WAVE 2 ACTIONS

1. Dealing with nonresponse

1.1 Screening: At first it was asked whether the respondent named ... was at home and available to be interviewed.

1.2 Refusal conversion:

1.3 Incentives: No incentives

2. Tracking of sampled units

2.1 Respondent contact information: Yes

2.2 Other contact information: No, but the information about the family was used to ask about him/her in order to minimize attrition.

2.3 Cards: No, but the report of the survey was disseminated on the web site.

2.4 Additional surveys: No

2.5 Administrative records: Yes, especially to look for individuals who moved from the household in wave 1.

Data Processing & Appraisal

Data Editing

WAVE 1 CLEANING OPERATIONS

Cleaning operations were performed. Moreover deterministic and probabilistic non-response imputation methods were performed.

WAVE 2 CLEANING OPERATIONS

Yes, cleaning operations were performed and consistency with wave 1 was also checked.

IMPROVEMENTS INTRODUCED WITH V.4.0 (March 2012):

- New constructed variables: asex agee abyear aeduc aactstat aparstat amarstat anpartner ankids ahhsz ahhstype ahhsz.

- New consolidated variables on respondents' current activity: a870, a871m, a871y, a873, a874, a875.

- New consolidated variables on respondents' partners current activity: a940, a941m, a941y, a945.

- Variables corrected: a601 and a602 (corrected, with consequences on the response rate of subsequent variables), a622, a624, a626, a627*, a628*, a629*, a383 (now rounded).

- Corrected weight variables: aweight (composed post-stratification weight that combines two weights: a) based on age, gender, region (full matrix) and b) based in age, sex, household size (margins))

FIRST DATASET RELEASED: V. 3.0 (December 2011).

Processing Checks

DATA HARMONISATION

The data is submitted in an already pre-harmonised form. It is prepared and organised according to the GGS standards. Harmonisation aims at achieving a clear and comparable format of the GGS micro-data files that would be adequate for cross-country comparison. The harmonisation procedure basically is composed of:

1. Label checks

This step makes sure that all the variables are named the same across the countries and refer to a particular question in the GGS Questionnaire. Also the value labels are checked. They should be the same across GGS datasets.

2. Dealing with grids

The GGS Questionnaire holds several grids of either event history information or members of the household. Such data needs to be harmonized with specific attention to order and logical consistency of grid-rows (be either household members or events such as births). In data sense each row of the grid is represented by variable name followed by a subscripted number ("_#"). Each subscript thus represents one household member or one event. Part of the grid harmonization is grid sorting. Grid rows are sorted according to pre-defined key. For example in the household grid, the household members are sorted according to their relationship to the respondent i.e. the relation to respondent variable (ahg3_# or bhg3_#). Respondents would appear, first, followed by their partners and children if any and then followed by other household members. As there

may be more than one child (or other relative) living in the household they also would need to be sorted. In the case of the household grid, age is used as the secondary sorting key (starting with the oldest person to the youngest).

3. Routing

Routing check ensures that the structure of underlying data set matches the structure of the GGS questionnaire. Its main goal is to code any given variable in the dataset to either a valid response, nonresponse or skip as indicated in the questionnaire. Consequently, the indicated skip in the questionnaire is represented with a system missing code (. in STATA, sysmis in SPSS), while the missing information for other reasons is coded into non-applicable/no response (i.e. codes 7, 8, 9 in SPSS or .a, .b, .c in STATA).

4. Consolidation

The process consolidates the information scattered over several variables into a single one. The consolidation procedure is carried out in the Children Section, the Partnership Section and the Parents and Parental Home Section.

5. Imputation

Due to its sensitive nature, the respondents are reluctant to share income information with the interviewer. In order to be able to use income information in a cross country comparative study and not to lose too many observations in the process it is necessary to impute the approximately correct distribution of the income variable in each country.

6. Calculation of derived variables

We calculate derived variables out of the following variables:

- grid variables (i.e., household grid, children grid, and partnership history grid); the codebook starts with the constructed variables that sum the key socio-demographic characteristics of the respondent.
- month and year variables,
- hours and minutes variables,
- frequency and unit variables.

Occupation variables are recoded into ISCO-88 1 digit.

Explanations of the ways in which consolidated and derived variables are obtained, are available under the field "Note" of the "Variable Description" sections.

For a more detailed and technical procedure please refer to the Data Cleaning and Harmonisation Guidelines.

Missing Data

The following missing values have been assigned:

- 6, 96, 996, etc. = Unknown (only for consolidated variables in the group "administrative variables")
- 7, 97, 997, etc. = Don't know
- 8, 98, 998, etc. = Refusal
- 9, 99, 999, etc. = Not-applicable/no response

Notes

Before publication in Nesstar GGS micro data files are further processed so as to ease online data browsing and analysing. We delete variables having all system missings.

File Content

VARIABLES HAVING ALL SYSTEM MISSING CASES ARE DROPPED BEFORE PUBLICATION IN NESSTAR. This is the reason why the total no. of variables in the Nesstar data file is smaller than the total number of variables in the SPSS and STATA files.

Variables are ordered according to the sections of the GGS codebook: Household, Children, Partnerships, Household Organisation and Partnership Quality, Parents and Parental Home, Fertility, Health and Well-Being, Respondent's Activity and Income, Activity and Education History, Partner's Activity and Income, Household Possessions, Income and Transfers, Value Orientations and Attitudes, Interviewers' report.

The variables begin with a letter designating the wave of data collection ("a" for the first wave likewise "b" for the second wave). We have attempted to keep the names of variables the same across the waves, and all the new variables would be identified as follows ["wave letter"]n e.g. bn301.

Although we encourage the countries to strictly follow the GGS Questionnaire, countries might implement a question that differs to a considerable extent from the GGS Questionnaire. In this case either we add country specific response values, or we introduce a country specific variable.

Country specific values are added when the question follows the model questionnaire, but the answers are not at all or partly compatible. They are at least 4 digits long (F4 format) and begin with the country code: e.g., Australia 2401. Hence, the country code, as an example, for Australia is 24.

A country specific variable is introduced when the question differs from the model questionnaire albeit measuring the same concept. This kind of variables is identified with a suffix given by the country code plus a number, e.g., Australia a119_2401. In order to have an overview of GGS country code, please refer to the variable "acountry".

Version

Harmonized dataset, GGS Wave2, version 1.3.

FIRST DATASET RELEASED: V. 1.3. (August 2016).

Processing Checks

WAVE 2 DATA HARMONISATION: see "Extent of Processing Checks" "WAVE 1 DATA HARMONISATION".

Missing Data

The following missing values have been assigned:

- 6, 96, 996, etc. = Unknown (only for consolidated variables in the group "administrative variables")
- 7, 97, 997, etc. = Don't know
- 8, 98, 998, etc. = Refusal
- 9, 99, 999, etc. = Not-applicable/no response

Notes

Before publication in Nesstar GGS micro data files are further processed so as to ease online data browsing and analysing. We delete variables having all system missings.

WAVE 2 DATASETS - Main differences compared to WAVE 1 datasets

Wave 2 datasets include an additional new section that had not been implemented in the Wave 1 data collection. It is the section no. 8 "Activity and Education History". Respondents report comprehensively on their activity and education history since age 16. Two additional sections are also present at the end of wave 2 dataset: "Interviewer observations" and "Interviewer report" (respectively sections no. 13 and 14).

A set of constructed variables at the top of the data file increase the usability of the GGS data by summarizing key socio-demographic characteristics of the respondent (age, birth year, sex, level of educational attainment, activity status, partnership status, number of co-resident partners, number of children, household size, household type). An additional set of variables consolidates information on the current activity of the respondent and his/her partner that is otherwise spread over the questionnaire. Another set of consolidated variables concern respondents' parents and parental home.

WAVE 2 DATASETS - Variables names

Variables in the Wave 2 data sets that are consistent with variables implemented in the Wave 1 questionnaire are named identically. Wave 2 variable names start with the letter "b" compared to letter "a" in Wave 1. Variables that have not been implemented in Wave 1 but collected in Wave 2 begin with "bn".

In Wave 2 datasets published in Nesstar, the variable "brid - R identification number" has been renamed into "arid" (same variable name than Wave 2). This allows the user to merge Wave 1 and Wave 2 datasets in Nesstar.

In Wave 2 datasets published in Nesstar, variable labels have the indication "(W2)". This allows the user to distinguish Wave 2 variables from Wave 1 variables, on the basis of the variable labels.

Variables List

Dataset contains 860 variable(s)

Literal question Interview started at...on...

Interviewer's instructions Interviewer Instruction: Read the following text.
This survey is called the Generations and Gender Survey. It is about topics related to children, partners, parents, work and everyday life. The aim is to study what factors influence family formation, having children, and relations between younger and older generations. The study is part of an international programme co-ordinated by the UN Economic Commission for Europe. Your participation is voluntary, but it is very important because you represent many other people. We will hold the information you give us in the strictest confidence and use it only for statistical processing. It would also be better if we could have this interview without others being present, if possible. If you have any questions, please let me know.

femage: If partnered: age of female

Information [Type= discrete] [Format=numeric] [Range= 14-85] [Missing=*]

Statistics [NW/ W] [Valid=3756 /-] [Invalid=5814 /-]

Definition Derived variable

Universe If R has a partner

Notes This variable indicates the age of the female in the relationship if the respondent says that they are currently in a relationship. If the respondent is female then the respondents age is used (aage.)

If the respondent is male and in a relationship with a female then their age is derived depending on the nature of the relationship. For a resident partner the age was copied from the Household grid (ahg5_); for a non resident partner the age was calculated as: year of interview MINUS question 311 (variable a315y).

Rs with non-resident partners are coded with "999 - not applicable/no response", when variable a315y is not available in the dataset.

Note that this variable does not have a value for same-sex partnerships.

Statistics [NW/ W]	[Valid=871 /-] [Invalid=8699 /-] [Mean=55.245 /-] [StdDev=4.756 /-]
Definition	Derived variable from Q 240 core questionnaire
Universe	If R has 2 or more grandchildren
Literal question	In what month and year was the youngest of your grandchildren born?
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month at birth of youngest grandchild was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"

Definition	Generated from consolidated variables a871m and a871y.
Literal question	In what month and year did you start this leave? In what month and year did you become unemployed? Since what month and year are you a student, studying at school, or in vocational training? In what month and year did you retire? Since what month and year are you a homemaker? In what month and year did you start this job or business?
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December" This variable is not available for Belgium.

a941AgeP: Partner's age at start of current activity status

Universe	If R has a partner.
Literal question	In what month and year did your partner/spouse start this leave? In what month and year did he/she become unemployed? Since what month and year is your partner/spouse a student, in school, or in vocational training? In what month and year did your partner/spouse retire? Since what month and year is your partner/spouse a homemaker?
Notes	Partner's time of birth was deducted from HH grid (co-resident partner) or Q 311 (non resident partner). If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December". In Belgium if the partner is still in education (a941y==2301) then the variable was coded as system missing.

Definition	Country-specific variable (adapted from Q 582.b core questionnaire). ITA: it differs because it asks about mothers' and fathers' opinions separately.		
Universe	R currently lives with parents/a parent		
Pre-question	Although you may feel that the decision to start living separately from parents is yours, it is likely that others have opinions about what you should do. I'm going to read out some statements about what other people might think about you leaving the parental home during the next three years. Please tell me to what extent you agree or disagree with these statements, choosing your answer from the card. Card 323: Agreement Scale

Pre-question Interviewer Instruction: Write in the time and date when the interview starts.

Literal question Interview started at...on...

Interviewer's instructions Interviewer Instruction: Read the following text.

This survey is a continuation of the Generations and Gender Survey in which you participated three years ago. It is part of an international programme co-ordinated by the UN Economic Commission for Europe. An interesting feature of our research is that it tries to follow the lives of people over a long period of time.

The aim of this research is to learn more about the everyday life, circumstances, and opinions of people and families. We want to gather information about the factors that influence the formation of new families, childbearing and preparation for old age. We also want to gather information about the lives of the young, middle-aged and old generations. This survey will show how people's life and family circumstances have changed over time, which will improve understanding of impediments of family life and relations of generations and help to develop policies for the future.

bmonth: Mnth of interview (W2)

Each person's answer is very important to us, because each person who was visited and questioned represents a particular group of our society. Therefore, although they were randomly selected, the participants of this survey proportionally represent all of the inhabitants of this country. That is why it is important to question the same people again this time. We will hold the information you give us in the strictest confidence, and use it only for statistical processing. If possible, it would be better if we could have this interview without others being present.

# b5117bAgeR: R's age of first time living separately from parents >= 3 mnths (W2)	
Statistics [NW/ W]	[Valid=341 /-] [Invalid=6135 /-]
Definition	Derived variable from Q 545 b. (var. b5117bm and b5117by).
Universe	If code 1 on Q 545.a
Literal question	In what month and year did that happen for the first time?
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month when first time living separately from parents was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December".

# b941AgeP: Partner's age at start of current activity status (consolidated) (W2)			
Definition	Derived variable from consolidated variables b941m and b941y (variables obtained from Q 1003, 1007, 1009, 1011, 1014, variables b903m, b903y, b907m, b907y, b909m, b909y, b911m, b911y, b914m, b914y)		
Universe	If R has a partner		
Literal question	In what month and year did your partner/spouse start [current activity]?		
Notes	Partner's time of birth was deducted from HH grid (co-resident partner) or Q 330 (non resident partner). If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December".
