Generations and Gender Survey Poland Wave 1 (GGS Poland Wave 1)

Generacje, rodziny i plec kulturowa (GGS-PL)

Overview	
Identification	GGSW1.26
Abstract	
<p>The Generations and Gender Survey (GGS) provides micro-level data with the aim of significantly improving the knowledge base for social science and policymaking in Europe and developed countries elsewhere.</p> <p>In Europe 2020, the European Union develops a strategy "to help us come out stronger from the crisis and turn the EU into a smart, sustainable and inclusive economy delivering high levels of employment, productivity and social cohesion". The economic crisis affects not only day-to-day decisions, but also fundamental choices at all stages of people's lives: marriage and childbearing, the combination of employment and caring responsibilities for the young and the old, retirement, housing, and ageing well. The GGS has been developed to provide scientists with high-quality data to contribute scientifically grounded answers to these key policy questions. Survey content focuses on intergenerational and gender relations between people, expressed in care arrangements and the organization of paid and unpaid work. Key feature of the survey are:</p> <ul style="list-style-type: none"> - Cross-national comparability. In each country data is collected on the basis of a common international questionnaire and guidelines about the methodology. Data processing includes central harmonization of national datasets. - A broad age range. It includes respondents between the ages of 18 and 80. - A longitudinal design. It has a panel design, collecting information on the same persons at three-year intervals. - A large sample size. It has an average of 9,000 respondents per country at Wave 1. - A theory-driven and multidisciplinary questionnaire. It provides data for policy relevant research by demographers, economists, sociologists, social policy researchers, social psychologists and epidemiologists. The questionnaire is inspired by the theory of planned behavior. - Possibility to combine the survey data with macro data provided by the GGP Contextual Database. This combination enables analyses of individuals and families in their cultural, economic, political, social and policy contexts. 	
Kind of Data	Survey data
Unit of Analysis	Individuals

Scope & Coverage	
Keywords	Fertility, Partnership, Transition to adulthood, Work-family balance, Gender relations, Intergenerational exchanges, Informal and formal care, Well-being and health, Grandparenthood, Economic activity, Retirement
Time Period(s)	2010-2011
Countries	Poland
Geographic Coverage	
The whole territory of Poland.	
Universe	
Polish speaking persons aged 18-79 (at the moment of survey), living in private households in Poland.

Sampling

Sampling Procedure

1. Sampling frame

1.1 Type of frame: Dwelling list from the National Official Register of Territorial Division of the Country (TERYT).

1.2 Frame coverage: Whole population of territory of Poland.

1.3 Frame size: 3798 units of territorial division.

1.4 Level of units available: Dwellings.

2. Sampling method

2.1 Sampling method type: The sample has been drawn using a two-stage sampling design. The sample size for voivodeships were established using the square root method. In voivodeships stratified sampling was used. The stratas were: municipalities (gminas), cities or districts (e.g. in Warsaw). The first-stage sampling units were enumeration census areas (about 4000), while at the second stage dwellings were selected (on average 5 by enumeration census area).

2.2 Sampling stage definition

- PSU: Enumeration census areas.

- SSU: Dwellings.

- TSU: NA.

2.3 Sampling stage size

- PSU: 4,000.

- SSU: 20,000.

- TSU: NA.

2.4 Unit selection: Simple Random Sampling (SRS).

2.5 Final stage unit selection: Simple Random Sampling (SRS).

2.6 Within household unit selection: Last birthday method.

2.7 Stratification: NA

2.8 Sample size

- Starting size sample: One basic sample of 20,000 addresses and two additional samples of 20,000 addresses.

- Aimed total size at Wave 1: 20,000 respondents.

- Aimed total size at Wave 3: none

2.9 Estimated Non-response

- Yearly attrition: None: the yearly attrition was not estimated.

- Non response measures: Oversampling (in order to have aimed sample size one main sample and two additional samples were selected of 20,000 addresses).

- Within household non-response measures: None, the household was marked as non-response.

Weighting

The weights based on current estimates of the population structures have been prepared by a person from the CSO involved in the regular surveys run by the CSO. In general, the applied formulas take into account: a probability of dwelling selection, coverage of the survey by voivodship and class of locality, use of the additional samples, and demographic characteristics of the population in private households. Since the population census of 2011 delivers data for new estimates of population structures, the weights proposed should be considered as preliminary ones. Calculation of new weights is conditioned on an availability of the population census results.

Variable aweight will be provided in later update of the dataset.

Data Collection

Data Collection Dates	Wave 1: start 2010-10-20 Wave 1: end 2011-02-28

<p>1. Interviewers</p> <p>1.1 Total number of interviewers: DK</p> <p>1.2 Number of interviewers in the field: DK</p> <p>1.3 Network organization: Field coordinators designated by the Center of field studies of the Polish Statistical Association, which was responsible for the field work.</p> <p>1.4 Working arrangement of interviewers: Fully employed (professional interviewers) working for the Central Statistical Office.</p> <p>1.5 Payment of interviewers: Paid per interview.</p> <p>2. Interviewer training:</p> <p>2.1 General interviewing: Coordinators of the field study and selected Interviewers were already trained in general interviewing techniques: interviewing techniques, appointments taking and general knowledge on surveys carried out by CSO.</p> <p>2.2 Survey specific: In July 2010, professional regional trainers of CSO were trained centrally in GGS specific issues and then trained other interviewers in each region of Poland.</p> <p>2.3 Length: General training: 1 day + contacts during the pilot survey, next the pilot survey report was prepared and sent to the coordinators.</p> <p>2.4 Control of performance: Checking the filled out of questionnaires, FAQ was active during the field work.</p> <p>2.5 Interviewer survey: Yes. It contained mainly questions concerning the conditions in which the interview was conducted (e.g. the way of filling in the questionnaire, the presence of other persons, their possible influence on answers received, the general attitude of the respondent).</p> <p>3. Contact protocols</p> <p>3.1 Advance letter: Each household selected in the sample received an advanced letter with a description of the survey, the agencies involved in the survey, the future use of the data, etc. The household was also invited to visit the survey website (http://www.sgh.waw.pl/institutu/isd/badania/ggs-pl/) to find more information about the survey and the project.</p> <p>3.2 Cold contacts: Face-to-Face</p> <p>3.3 Scheduling / scattering: In the case of short-term absence of the selected respondent, the interview could have been postponed to the next date. In case of long term absence of the selected respondent, the interview could not be completed and this fact was classified as non-response.</p> <p>3.4 Contact history: No, the contact history was recorded only in case of the interview (or attempt).</p> <p>3.5 Min number of contacts: NA</p> <p>3.6 Max number of contacts: NA</p> <p>4. Questionnaire localization</p> <p>4.1 Validation: DK</p> <p>4.2 Pre-test: The first version of the questionnaire was tested in the pilot survey (carried out in August 2010).</p> <p>4.3 Length of interview: DK</p>

# Cases	19987
# Variable(s)	1062

File Content

VARIABLES HAVING ALL SYSTEM MISSING CASES ARE DROPPED BEFORE PUBLICATION IN NESSTAR. This is the reason why the total no. of variables in the Nesstar data file is smaller than the total number of variables in the SPSS and STATA files.

Variables are ordered according to the sections of the GGS codebook: Household, Children, Partnerships, Household Organisation and Partnership Quality, Parents and Parental Home, Fertility, Health and Well-Being, Respondent's Activity and Income, Partner's Activity and Income, Household Possessions, Income and Transfers, Value Orientations and Attitudes, Interviewers' report.

The variables begin with a letter designating the wave of data collection ("a" for the first wave likewise "b" for the second wave). We have attempted to keep the names of variables the same across the waves, and all the new variables would be identified as follows ["wave letter"]n e.g. bn301.

Although we encourage the countries to strictly follow the GGS Questionnaire, countries might implement a question that differs to a considerable extent from the GGS Questionnaire. In this case either we add country specific response values, or we introduce a country specific variable.

Country specific values are added when the question follows the model questionnaire, but the answers are not at all or partly compatible. They are at least 4 digits long (F4 format) and begin with the country code: e.g., Australia 2401. Hence, the country code, as an example, for Australia is 24.

A country specific variable is introduced when the question differs from the model questionnaire albeit measuring the same concept. This kind of variables is identified with a suffix given by the country code plus a number, e.g., Australia a119_2401. In order to have an overview of GGS country code, please refer to the variable "acountry".

Version

Harmonized dataset, GGS Wave1, version 4.2.

IMPROVEMENTS INTRODUCED WITH V.4.2. (February 2014):

The update from v4.1 to v4.2 does not include corrections of existing variables.

The update only includes additional variables which are derived from the pre-existing datasets

- Variables derived from grid variables and variables which concern the respondents and his/her partner: numdissol numdivorce nummarriage numpartners livingwithpartner childprevp femage maleage femeduc maleeduc fertintent numbiol numres numnonres numstep numallchild ageyoungest ageoldest numrespleave numotherparentleave coreschild coresparen coresgrandp coressibl.

- Variables derived from month and year variable:

- Variables derived from hours and minutes variables: a324_hour a520_hour a540_hour.

- Variables derived from frequency and unit variables:

a205mnth,a241mnth,a325mnth,a355mnth,a359mnth,a363mnth,a367mnth,a521mnth,a541mnth,a1008mnth,a1102mnth; a203c_?w a204c_?w.

- Occupation variables recoded into ISCO-88 1 digit: a828_1dig a832_1dig a861_1dig a917_1dig a921_1dig a933_1dig a5112_1dig a5114_1dig.

FIRST DATASET RELEASED: V. 4.1 (October 2013).

Processing Checks

DATA HARMONISATION

The data is submitted in an already pre-harmonised form. It is prepared and organised according to the GGS standards. Harmonisation aims at achieving a clear and comparable format of the GGS micro-data files that would be adequate for cross-country comparison. The harmonisation procedure basically is composed of:

1. Label checks

This step makes sure that all the variables are named the same across the countries and refer to a particular question in the GGS Questionnaire. Also the value labels are checked. They should be the same across GGS datasets.

2. Dealing with grids

The GGS Questionnaire holds several grids of either event history information or members of the household. Such data needs to be harmonized with specific attention to order and logical consistency of grid-rows (be either household members or events such as births). In data sense each row of the grid is represented by variable name followed by a subscripted number ("_#"). Each subscript thus represents one household member or one event. Part of the grid harmonization is grid sorting. Grid rows are sorted according to pre-defined key. For example in the household grid, the household members are sorted according to their relationship to the respondent i.e. the relation to respondent variable (ahg3_# or bhg3_#). Respondents would appear, first, followed by their partners and children if any and then followed by other household members. As there may be more than one child (or other relative) living in the household they also would need to be sorted. In the case of the household grid, age is used as the secondary sorting key (starting with the oldest person to the youngest).

3. Routing

Routing check ensures that the structure of underlying data set matches the structure of the GGS questionnaire. Its main goal is to code any given variable in the dataset to either a valid response, nonresponse or skip as indicated in the questionnaire. Consequently, the indicated skip in the questionnaire is represented with a system missing code (. in STATA, sysmis in SPSS), while the missing information for other reasons is coded into non-applicable/no response (i.e. codes 7, 8, 9 in SPSS or .a, .b, .c in STATA).

4. Consolidation

The process consolidates the information scattered over several variables into a single one. The consolidation procedure is carried out in the Children Section, the Partnership Section and the Parents and Parental Home Section.

5. Imputation

Due to its sensitive nature, the respondents are reluctant to share income information with the interviewer. In order to be able to use income information in a cross country comparative study and not to lose too many observations in the process it is necessary to impute the approximately correct distribution of the income variable in each country.

6. Calculation of derived variables

We calculate derived variables out of the following variables:

- grid variables (i.e., household grid, children grid, and partnership history grid); the codebook starts with the constructed variables that sum the key socio-demographic characteristics of the respondent.
- month and year variables,
- hours and minutes variables,
- frequency and unit variables.

Occupation variables are recoded into ISCO-88 1 digit.

Explanations of the ways in which consolidated and derived variables are obtained, are available under the field "Note" of the "Variable Description" sections.

For a more detailed and technical procedure please refer to the Data Cleaning and Harmonisation Guidelines.

Missing Data

The following missing values have been assigned:

- 6, 96, 996, etc. = Unknown (only for consolidated variables in the group "administrative variables")
- 7, 97, 997, etc. = Don't know
- 8, 98, 998, etc. = Refusal
- 9, 99, 999, etc. = Not-applicable/no response

For further information, see the GGS Wave 1 questionnaire manual: <http://www.ggp-i.org/materials/survey-instruments.html>.

Notes

Before publication in Nesstar GGS micro data files are further processed so as to ease online data browsing and analysing. We delete variables having all system missings.

Interviewer's instructions Interviewer Instruction: Read the following text.
This survey is called the Generations and Gender Survey. It is about topics related to children, partners, parents, work and everyday life. The aim is to study what factors influence family formation, having children, and relations between younger and older generations. The study is part of an international programme co-ordinated by the UN Economic Commission for Europe. Your participation is voluntary, but it is very important because you represent many other people. We will hold the information you give us in the strictest confidence and use it only for statistical processing. It would also be better if we could have this interview without others being present, if possible. If you have any questions, please let me know.

Statistics [NW/ W]	[Valid=7144 /-] [Invalid=12843 /-]
Definition	Derived variable
Universe	If R has a partner
Notes	<p>This variable indicates the age of the female in the relationship if the respondent says that they are currently in a relationship. If the respondent is female then the respondents age is used (aage.)</p>

File : GGS_Wave1_Poland_V.4.2.

femage: If partnered: age of female

If the respondent is male and in a relationship with a female then their age is derived depending on the nature of the relationship. For a resident partner the age was copied from the Household grid (ahg5_); for a non resident partner the age was calculated as: year of interview MINUS question 311 (variable a315y).
 Rs with non-resident partners are coded with "999 - not applicable/no response", when variable a315y is not available in the dataset.
 Note that this variable does not have a value for same-sex partnerships.

# a121AgeR: R's age of starting to live in current dwelling	
Information	[Type= discrete] [Format=numeric] [Range= 0-78] [Missing=*/997/998/999]
Statistics [NW/ W]	[Valid=19336 /-] [Invalid=651 /-] [Mean=26.553 /-] [StdDev=15.007 /-]
Definition	Derived variable from Q 115 core questionnaire
Literal question	In what month and year did you start living in this [type of accommodation]?
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month of starting to live in the current dwelling was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December". Data is not available for Estonia.

a150AgeR: R's age of achieving the current education level

Information	[Type= discrete] [Format=numeric] [Range= 0-69] [Missing=* /997/998/999]
Statistics [NW/ W]	[Valid=19539 /-] [Invalid=448 /-] [Mean=20.314 /-] [StdDev=5.955 /-]
Definition	Derived variable from Q 122 core questionnaire
Literal question	In what month and year did you reach that level?

a150AgeR: R's age of achieving the current education level

Notes

R's time of birth was deducted from HH grid. If information on the month of birth / month of achieving the current education level was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December".

Statistics [NW/ W]	[Valid=229 /-] [Invalid=19758 /-] [Mean=11.873 /-] [StdDev=11.578 /-]
Definition	Consolidated variable from variables a303AgeP and a316cAgeP (derived variables from Q 304.c and Q 312.c core questionnaire).
Universe	If R's partner not born in [country]
Literal question	In what month and year did he/she first start living permanently in [COUNTRY]?
Notes	Co-resident Partner's time of birth was deducted from HH grid. Non Resident Partner's time of birth was deducted from the answer to Q 311. If information on the month of birth / month of starting permanent residence was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December"

a871AgeR: R's age at start of current activity status

Information	[Type= discrete] [Format=numeric] [Range= 0-73] [Missing=*997/998/999]
Statistics [NW/ W]	[Valid=17372 /-] [Invalid=2615 /-] [Mean=38.237 /-] [StdDev=15.632 /-]
Definition	Generated from consolidated variables a871m and a871y.
Literal question	In what month and year did you start this leave? In what month and year did you become unemployed? Since what month and year are you a student, studying at school, or in vocational training? In what month and year did you retire? Since what month and year are you a homemaker? In what month and year did you start this job or business?
Notes	R's time of birth was deducted from HH grid. If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the followig way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December" This variable is not available for Belgium.

Statistics [NW/ W]	[Valid=4473 /-] [Invalid=15514 /-] [Mean=48.699 /-] [StdDev=14.088 /-]
Definition	Generated from consolidated variables a941m and a941y.
Universe	If R has a partner.
Literal question	In what month and year did your partner/spouse start this leave? In what month and year did he/she become unemployed? Since what month and year is your partner/spouse a student, in school, or in vocational training? In what month and year did your partner/spouse retire? Since what month and year is your partner/spouse a homemaker?
Notes	Partner's time of birth was deducted from HH grid (co-resident partner) or Q 311 (non resident partner). If information on the month of birth / month at start of current activity status was missing, a 6 (june) was used in the calculation. Values 21-25 for month values are converted in the following way: "Beginning of the Year" = "January-February"; "Spring" = "May"; "Summer" = "August"; "Autumn" = "October"; "End of Year" = "December". In Belgium if the partner is still in education (a941y==2301) then the variable was coded as system missing.

Information	[Type= discrete] [Format=numeric] [Range= 0-10225] [Missing=*/99999997/99999998/99999999]
Statistics [NW/ W]	[Valid=19987 /-] [Invalid=0 /-] [Mean=42479273.979 /-] [StdDev=49430704.874 /-]
Definition	Derived variable from Q 1008 core questionnaire

a1008mnth: Average monthly net income of all HH members (last 12 months)

Literal question	If you add up the income from all sources received during the last 12 months, what is your household's total net income from all members including yourself? Please state the net income, which means after deductions for taxes and social security.
Post-question	Write in. If R gave the answer per month, probe: Does this sum describe the average income of your household over the last 12 months? [If not] Please tell me the average value over the last 12 months.
Notes	Frequencies per year were converted to frequency per month. Values have been rounded to 1/10; values exceeding 1 have been rounded to the nearest integer.
