

## Generations & Gender Programme Newsletter

No. 99 | June 2024

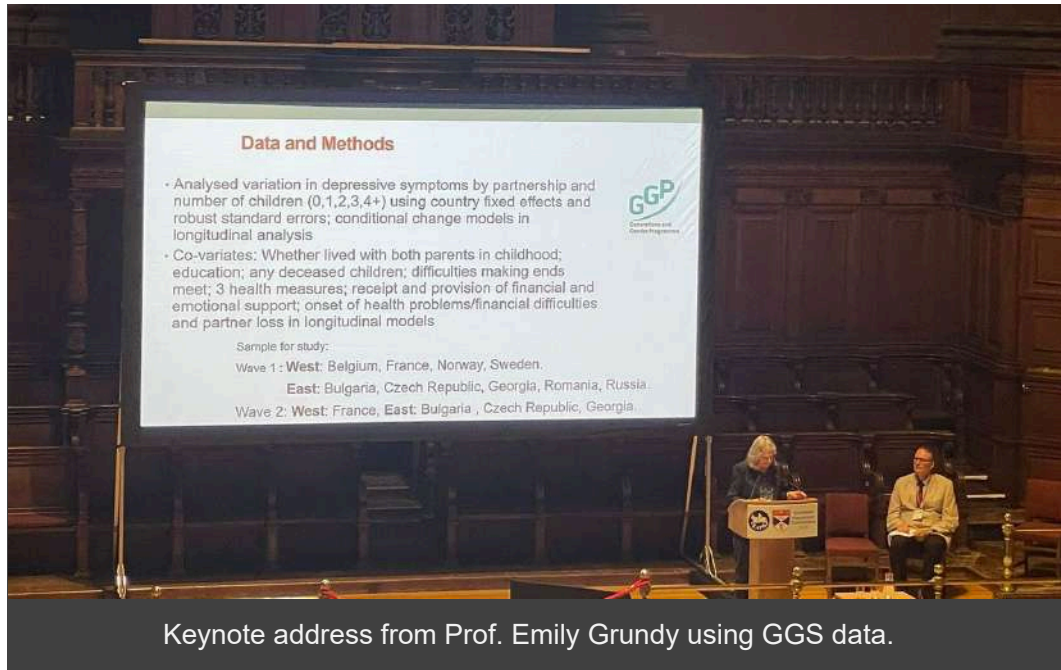

### *GGP proudly represented at EPC 2024*

The GGP was prominently featured at the **European Population Conference 2024**, held in Edinburgh from 12-15th of June. As an official sponsor of the event, the GGP Central Hub and NIDI staff warmly welcomed data users, members of national teams, and other interested attendees at our **exhibition booth**.

Visitors to the GGP booth enjoyed **engaging discussions**, received **informative materials**, and were delighted with **GGP frisbees**—an effort to inspire future generations! Additionally, visitors were offered a special EPC

edition of Demos, which featured an article on the Sustainable Development Goals related to gender equality using GGS data. You can read the article [here](#).

Keynote address from Prof. Emily Grundy using GGS data.

The conference program included **over 20 presentations and posters** utilising GGS data, covering a wide range of topics such as fertility, singlehood, co-residence and well-being, loneliness, and the division of household labour. The **keynote address** by Prof. Emily Grundy from the University of Essex, titled 'Family life courses and intergenerational influences on later life health and well-being in Europe' also featured analysis using GGS data.

We are also proud to extend our congratulations to Stefano Arnolfo and his co-authors Nicole Hiekel and Aart Liefbroer for winning an **EPC 2024 Poster Award**. Their poster, titled 'Cascading Lives. Socio-Economic Status and the Gendered Pathways into Multipartnered Fertility in Four Nordic Countries' used **GGS-II data from Denmark, Finland, Norway, and Sweden**.

Future generations playing with GGP frisbees!

## Policy Briefing and Launch of GGS-II Wave 1 NL Data

On June 20th, the Dutch national team and the Generations and Gender Programme (GGP) organised a **policy briefing** at NIDI in The Hague, titled **'Future Prospects for Individuals and Families?'**

The event marked the **launch of the GGS-II Wave 1 Netherlands dataset**. Lin Rouvroye led discussions on the importance of international comparative research and the challenges of translating scientific insights into policy. Arieke Rijken opened the briefing with an overview of GGP activities and data collection methods.

NIDI researchers shared key findings from the Dutch GGS-II Wave 1 data. Lonneke van den Berg revealed that Dutch young adults with temporary contracts experience lower well-being and higher levels of depression. Daniël van Wijk's research highlighted how housing market conditions affect family formation decisions, with renters in the Netherlands showing lower intentions to have children—a trend not observed in Germany and Austria. Aat Liefbroer pointed out that over 40 percent of older Dutch respondents were single at some point between ages 30 and 50, significantly impacting their prosperity and well-being.

## ***GGP on Czech National Roadmap***

We are pleased to announce that the **Czech Generations and Gender Programme** (GGP-CZ) has been approved as the **latest addition to the Czech national roadmap** of large research infrastructures. Notably, GGP-CZ is the only new research infrastructure featured in this edition of the roadmap.

This approval underscores the Czech government's commitment to funding the **continued operation and development of GGP-CZ** through 2026 and potentially beyond, pending a successful evaluation. It also signifies full commitment and political support for the establishment of GGP-ERIC.

As a result, the Czech GGP team, led by Principal Investigator Martin Kreidl at Masaryk University and co-PI Anna Šťastná at Charles University, can now

## Updates from the GGP Central Hub

### Fieldwork: GGS-II Wave 1 (Baseline questionnaire)

Data collection in **France** is ongoing, with over 12,000 interviews conducted mainly in CAWI but also in CATI mode. Data collection will be completed on the 8th of July. Data collection in **Taiwan** is also still in progress with over 1,200 conducted CAPI interviews and over 4,900 completed CAWI interviews. The goal of Taiwan is to reach around 4,500 CAPI interviews.

📢 **GGS-II wave 1 dataset released** 📢 GGS-II wave 1 for **Croatia, Germany** and **the Netherlands** has been released. Minor updates for **Denmark, Finland** and **Sweden** have also been released. Click [here](#) to access all GGS-II wave 1 data and more!

## Upcoming Events

[FReDA Autumn School 2024](#) | Mainz, Germany | 30 September - 2 October 2024.

FReDA – The German Family Demography Panel Study is organising the **FReDA Autumn School** in cooperation with the "Interdisciplinary Public Policy" (IPP) at Johannes Gutenberg University Mainz. The three-day workshop will take place from **30 September - 2 October 2024** in **Mainz** and is aimed at researchers who would like to work with FReDA data. The [registration deadline](#) is **31 July 2024**.
